Getting the COVID-19 vaccination

How do I get the COVID-19 vaccination?	6
I've received a letter but someone I live with who is the same age hasn't yet. Can we get vaccinated together?	7
Does the booking service work for people who don't understand English well or are deaf?	7
I'm over 18 so can now get in touch with the NHS to get my vaccination, but does that mean I can turn up at vaccination services without an appointment?	7
Do I need to know my NHS number?	8
Can I choose which vaccine I want?	8
If I've already had my first dose will I be able to book my second in this way?	8
I walked-in for my first dose, how do I know when I'm booking for my second that I'll get the same vaccine?	8
What happens if more than 8 or 12 weeks pass before I have my second vaccine?	9
Where will I get my second vaccine?	9
Will this approach also apply to the next priority groups when it is their turn to be vaccinated?	9
How do I get an NHS number?	10
I've had my first COVID-19 vaccine, where can I find more information on what to expect next?	10
Why is the NHS postponing second doses?	11
Is there a large vaccination centre in Westminster?	11
What if I don't live close to one of the large vaccination centres?	11
What if I can't get to the vaccination centre?	12
I'm vulnerable – do I need to travel to get the vaccine?	12
Has the MHRA approved care home jabs?	12

Can I get the COVID-19 vaccine privately?	12
Why have I not been contacted by anyone about a vaccination?	12
Does the NHS have the capacity and supplies available if lots of people now book?	13
How is the NHS ensuring that the vaccine won't be wasted?	13
What if I book an appointment through the NHS website or 119 and I need to rearrange it?	13
Can I still book if I previously had an appointment but didn't attend or cancelled?	13
A letter came to my home but it was for someone else. Can I still use it to book an appointment?	13
What about people with uncertain immigration status? Can they receive the vaccine and is it safe?	13

COVID-19, side effects and ingredients

I've already had COVID-19. Should I get vaccinated?	14
Can the vaccine cause side effects?	14
Will the vaccine work with the new strain of COVID-19?	14
What is the guidance on allergies?	14
What is the guidance for pregnant women and those who are breastfeeding?	15
Where can I find information about the vaccine ingredients?	15
Does the vaccine include any parts from foetal or animal origin?	15
Can the vaccine alter your genetic material?	15
Were the vaccines tested on high-risk groups?	16

More information

Where can I find more information about the COVID-19 vaccine?	16

COVID-19 vaccine FAQs

1. What vaccines for COVID-19 are currently available?

In the UK, there are three types of COVID-19 vaccine that have been approved for use:

- Pfizer-BioNTech vaccine
- Oxford/AstraZeneca vaccine
- Moderna vaccine

The COVID-19 vaccine is given as an injection into your upper arm. They all require two doses to provide the best protection. The first dose of the COVID-19 vaccine offers a high level of protection, but to get longer-lasting protection you will need to get a second dose.

You should book an appointment for your second dose for 8 – 12 weeks after your first. The NHS is trying to offer people their second vaccine as soon as possible, this may mean you are invited in for your second dose earlier than expected or you can rebook either through the [national booking system](#) or by calling NHS **119**, free of charge.

If you have not yet had your second dose of Astra Zeneca, and more than a month has passed since you had your first vaccine, you can now walk-in to an NHS vaccination centre for your second. You can check daily walk-in availability via the NHS in [North West London](#).

2. How does the vaccine work?

The COVID-19 vaccine works by making a protein from the virus that is important for creating protection. The protein works in the same way it does for other vaccines by stimulating the immune system to make antibodies and cells to fight the infection.

3. Will the vaccine protect me?

The COVID-19 vaccine will protect you against COVID-19. Each vaccine has been tested in more than 20,000 people in several different countries and has been shown to be safe. It may take a week or two for your body to build up some protection from the first dose of vaccine. Like all medicines, no vaccine is completely effective, so you should continue to take recommended precautions after vaccination to avoid infection. Some people may still get COVID-19 despite having a vaccination, but this should be less severe.

4. Can I catch COVID-19 from the vaccine?

You cannot catch COVID-19 from the vaccine, but it is possible to have caught COVID-19 and not realise you have the symptoms until after your vaccination appointment.

[For more information on COVID-19 symptoms, visit the NHS website.](#)

5. Can I give COVID-19 to anyone after I have had the vaccine?

The vaccine cannot give you COVID-19, and two doses will reduce your chance of becoming seriously ill. It is not yet known whether it will stop you from catching and passing on the virus. So it is important to follow national and local guidance to protect those around you. To protect yourself and your family, friends and colleagues you still need to:

- practice social distancing
- wear a face mask
- wash your hands carefully and frequently
- let fresh air into your home by opening windows, doors and air vents as much as possible
- follow the current Government guidance for your local area.

For the latest information from the Government on COVID-19, visit the [GOV.UK website](#).

6. Are the vaccines safe?

Yes, the vaccines have been proven to be safe. The NHS will not offer any COVID-19 vaccinations to the public unless independent experts have declared that it is safe to do so. The MHRA, the official UK regulator, has said the three types of vaccine are safe and highly effective. There are checks at every stage in the development and manufacturing process, and monitoring continues after authorisation.

7. But what about the AstraZeneca vaccine, is that safe to have?

The Medicines Regulator, the MHRA, has confirmed the benefits of the AstraZeneca vaccine in preventing COVID-19 continue to outweigh the risks, this is despite a possible link between the vaccination and extremely rare and unlikely specific blood clots.

To put this into context, the overall risk of these blood clots is about four people in every million who receive that vaccine.

The advice continues to be that the benefits of vaccination continue to outweigh any risks and that vaccines continue to be the best way to protect against COVID-19.

There is new, and specific advice for some groups:

1. Anyone who is at a higher risk of specific types of blood clots because of their medical condition should speak to their GP before receiving their COVID-19 vaccination.
2. For people under 40 without other health conditions, it's currently advised that it's preferable to have another COVID-19 vaccine instead of the AstraZeneca vaccine.

Anyone who did not have these side effects should come forward for their second dose when invited.

For people aged 40 or over and those with other health conditions, the NHS advises that the benefits of being vaccinated outweigh any risk of clotting problems.

For the latest information, please visit the [NHS coronavirus vaccination website](#).

8. How were the vaccines developed so quickly?

Medicines including vaccines are highly regulated – and that is no different for the approved COVID-19 vaccines. There are a number of factors that made it possible to develop the vaccines relatively quickly compared to other medicines:

1. The different phases of the clinical trial overlapped instead of running one after each other which sped up the clinical process;
2. Experts at the MHRA reviewed data as each trial was being delivered as opposed to getting all information at the end of a trial;
3. Clinical trials managed to recruit people very quickly as a global effort meant thousands of people were willing to volunteer.

8. Who should have the COVID-19 vaccine?

The NHS is currently offering the COVID-19 vaccine to people most at risk from coronavirus. This includes those who are the main carer for someone at high risk, older adults, frontline health and social care workers, care home residents and staff, and those with certain clinical conditions or at greater risk from COVID-19. When more vaccine becomes available, the vaccines will be offered to other people at risk as soon as possible.

For more information, read the [COVID-19 vaccination: A guide for older adults](#).

Getting the COVID-19 vaccination

9. How do I get the COVID-19 vaccination?

If you are aged 18 or over, or if you'll turn 18 before 1 July 2021, clinically extremely vulnerable, clinically vulnerable, or you are the main carer for someone at high risk, an eligible frontline health worker or an eligible frontline social worker you can now get your COVID-19 vaccine in Westminster.

Walk-in COVID-19 vaccine appointments are now available at the large vaccination centre at etc. venues Marble Arch, 86 Edgware Road, W2 2EA, with the entrance on Forset Street. The centre is open 9am – 7pm, Monday to Sunday. Please take along proof of your age, name and address and your NHS number, if you have it.

Please note that the walk-in service operates on a first come, first served basis for residents eligible to be vaccinated and it is possible you will be asked to come back at a later date should supplies run out on a given day.

You can guarantee an appointment by booking via the [National Booking Portal](#) or by calling NHS 119 free of charge.

If you would prefer to receive your vaccine at another location, please visit the [council website](#) for the latest information, including how to book.

The COVID-19 vaccination sites are run by NHS professionals and have extra measures in place to keep you safe during your visit. If you would prefer to receive the vaccine at a GP surgery, please wait to be contacted.

For information about vaccines, visit the [NHS website](#).

10. I've received a letter but someone I live with who is the same age hasn't yet. Can we get vaccinated together?

If the person you live with is aged 18 or over, or if you'll turn 18 before 1 July 2021, or over or are the main carer for someone at high risk, clinically extremely vulnerable, clinically vulnerable, or an eligible frontline health and social care worker, they can now get their COVID-19 vaccine in Westminster.

Walk-in COVID-19 vaccine appointments are now available at the large vaccination centre at etc. venues Marble Arch, 86 Edgware Road, W2 2EA, with the entrance on Forset Street. The centre is open 9am – 7pm, Monday to Sunday. Please take along proof of your age, name and address and your NHS number, if you have it.

Please note that the walk-in service operates on a first come, first served basis for residents eligible to be vaccinated and it is possible you will be asked to come back at a later date should supplies run out on a given day.

You can guarantee an appointment by booking via the [National Booking Portal](#) or by calling NHS 119 free of charge.

If you would prefer to receive your vaccine at another location, please visit the [council website](#) for the latest information, including how to book.

The COVID-19 vaccination sites are run by NHS professionals and have extra measures in place to keep you safe during your visit. If you would prefer to receive the vaccine at a GP surgery, please wait to be contacted.

11. Does the booking service work for people who don't understand English well or are deaf?

The phone line will have interpreters and a British Sign Language facility is available on request to help you book your appointments.

12. I'm over 18 so can now get in touch with the NHS to get my vaccination, but does that mean I can turn up at vaccination services without an appointment?

Walk-in COVID-19 vaccine appointments are now available at the large vaccination centre at etc. venues Marble Arch, 86 Edgware Road, W2 2EA, with the entrance on Forset Street. The centre is open 9am – 7pm, Monday to Sunday. Please take along proof of your age, name and address and your NHS number, if you have it.

Please note that the walk-in service operates on a first come, first served basis for residents eligible to be vaccinated and it is possible you will be asked to come back at a later date should supplies run out on a given day.

You can guarantee an appointment by booking via the [National Booking Portal](#) or by calling NHS 119 free of charge.

If you would prefer to receive your vaccine at another location, please visit the [council website](#) for the latest information, including how to book.

13. Do I need to know my NHS number?

No. It's easier if you do have your NHS number, but if you don't both the NHS booking website, phone line and large vaccination centre staff can still book appointments using other details, provided you are registered with a GP practice.

You can find your NHS number on the NHS App or on the [NHS website](#).

14. Can I choose which vaccine I want?

No. The vaccines that the NHS uses and in what circumstances will be decided by the MHRA. Please rest assured that each of the vaccines have been approved because they pass the MHRA's tests on safety and efficacy.

If you are eligible for the COVID-19 vaccine, you can get your vaccine. For the latest information, please visit the council website.

15. If I've already had my first dose will I be able to book my second in this way?

No. You will only be able to book if NHS records show you have yet to have your first dose. The first dose of the COVID-19 vaccine offers a high level of protection, but to get longer-lasting protection you will need to get a second dose. You should book an appointment for your second dose for 8 – 12 weeks after your first.

You should book both appointments at the same time on the [national booking system](#). If you attend a walk in for your first dose, you can book your second on the [national booking system](#) or by calling NHS **119**, free of charge from 48 hours after you've had your vaccine.

The NHS is trying to offer people their second vaccine as soon as possible, this may mean you are invited in for your second dose earlier than expected or you can rebook either through the [national booking system](#) or by calling NHS **119**, free of charge. An NHS number will have been generated if you don't already have one when you had your first vaccine.

If you have not yet had your second dose of Astra Zeneca, and more than a month has passed since you had your first vaccine, you can now walk-in to an NHS vaccination centre for your second. You can check daily walk-in availability via the NHS in [North West London](#).

16. I walked-in for my first dose, how do I know when I'm booking for my second that I'll get the same vaccine?

When you receive your first vaccine, you will receive a vaccination card which will include details of which vaccine you received. This will also be registered on your NHS record. You will receive the same vaccine on your second dose as your first.

17. What happens if more than 8 or 12 weeks pass before I have my second vaccine?

If for any reason you miss having your second vaccine, please make sure you book-in and have it as soon as possible.

If your GP booked you in for your first vaccine please contact them. If you booked your first vaccine through the **online booking system**, please repeat this for your second vaccine.

It is important that you have both doses of your vaccine to ensure you have the maximum level of protection from coronavirus.

18. Where will I get my second vaccine?

For your second vaccine, you will be asked to return to the same venue that you had your first vaccine. Please note that the last day for vaccinations at Lord's was Wednesday 12 May and Westminster Abbey on Wednesday 26 May, vaccinations are no longer available at Lord's after 12 May or Westminster Abbey after 26 May. If you received your first dose at Lord's or Westminster Abbey, the NHS will be in touch to book your second vaccination when it's time.

19. Will this approach also apply to the next priority groups when it is their turn to be vaccinated?

The first dose of the COVID-19 vaccine offers a high level of protection, but to get longer-lasting protection you will need to get a second dose.

You should book an appointment for your second dose for 8 – 12 weeks after your first. The NHS is trying to offer people their second vaccine as soon as possible, this may mean you are invited in for your second dose earlier than expected or you can rebook either through the **national booking system** or by calling NHS **119**, free of charge.

If you have not yet had your second dose of Astra Zeneca, and more than a month has passed since you had your first vaccine, you can now walk-in to an NHS vaccination centre for your second. You can check daily walk-in availability via the NHS in **North West London**.

You can find more information in the NHS COVID-19 vaccination: What to expect guide.

20. How do I get an NHS number?

You may already have an NHS number but just don't know it. If you don't know your NHS number, you can find out if you have one and what it is on the [NHS website](#).

If you don't have an NHS number this is likely to be because you are not registered with a GP. If this is the case, we would recommend speaking with your local practice about registering.

As well as getting access to COVID-19 vaccines, being registered with a GP also means you are invited to important health checks such as for cancer or heart disease, and can access care easier when you need it.

More information on registering with a GP is available on the [NHS website](#).

It is important that you have both doses of your vaccine to ensure you have the maximum level of protection from coronavirus.

Please book and attend your second appointment. The first dose of the COVID-19 vaccine offers a high level of protection, but to get longer-lasting protection you will need to get a second dose.

21. I've had my first COVID-19 vaccine, where can I find more information on what to expect next?

The first dose of the COVID-19 vaccine offers a high level of protection, but to get longer-lasting protection you will need to get a second dose.

You should book an appointment for your second dose for 8 – 12 weeks after your first. You should book both appointments at the same time on the [national booking system](#). If you attend a walk in for your first dose, you can book your second on the [national booking system](#) or by calling NHS [119](#), free of charge from 48 hours after you've had your vaccine.

The NHS is trying to offer people their second vaccine as soon as possible, this may mean you are invited in for your second dose earlier than expected or you can rebook either through the [national booking system](#) or by calling NHS [119](#), free of charge.

If you have not yet had your second dose of Astra Zeneca, and more than a month has passed since you had your first vaccine, you can now walk-in to an NHS vaccination centre for your second. You can check daily walk-in availability via the NHS in [North West London](#).

You can find more information in the [NHS COVID-19 vaccination: What to expect guide](#).

22. Why is the NHS postponing second doses?

The UK Chief Medical Officers have agreed a longer timeframe between first and second doses so that more people can get their first dose quickly.

The first dose of the COVID-19 vaccine offers a high level of protection, but to get longer-lasting protection you will need to get a second dose.

You should book an appointment for your second dose for 8 – 12 weeks after your first. The NHS is trying to offer people their second vaccine as soon as possible, this may mean you are invited in for your second dose earlier than expected or you can rebook either through the [national booking system](#) or by calling NHS **119**, free of charge.

If you have not yet had your second dose of Astra Zeneca, and more than a month has passed since you had your first vaccine, you can now walk-in to an NHS vaccination centre for your second. You can check daily walk-in availability via the NHS in [North West London](#).

Please book and attend your second appointment.

23. Is there a large vaccination centre in Westminster?

A large vaccination centre opened in Westminster at the start of March. The centre is based at etc. venues Marble Arch, 86 Edgware Road, W2 2EA. The site will deliver thousands of jabs each week and offer an alternative to GP-led and hospital services that are already set up across north west London.

Walk-in COVID-19 vaccine appointments are now available at etc. venues Marble Arch if you are eligible for your COVID-19 vaccine.

Please note that the walk-in service operates on a first come, first served basis for residents eligible to be vaccinated and it is possible you will be asked to come back at a later date should supplies run out on a given day.

You can guarantee an appointment by booking via the [National Booking Portal](#) or by calling NHS 119 free of charge.

If you would prefer to receive your vaccine at another location, please visit the [council website](#) for the latest information, including how to book.

[For more information about large vaccination centres, visit the NHS website.](#)

24. What if I don't live close to one of the large vaccination centres?

The National Booking Service also handles booking for pharmacy-led vaccination services, of which there are around 200 across the country. Only a small number of people don't live within travelling distance of at least one of these services.

Alternatively, you can also choose to wait to be contacted by your local GP services. If they haven't been in contact already, this will be soon.

[For the latest information on COVID-19 vaccines in Westminster, please visit the council website.](#)

25. What if I can't get to the vaccination centre?

People who are housebound will be contacted by their GP services about alternative ways to get vaccinated. If you can't get to the vaccination centre, you can also wait until more locations closer to where you live become available. The NHS will follow up with those who haven't booked their appointment, as a reminder.

Age UK is offering a free taxi service for people aged 50 and above to get to and from their COVID-19 vaccination appointments. The service uses Uber and the full cost of the travel to and from the vaccination centre will be covered.

If you are aged 50 or above and would like Age UK to arrange free taxi transport to and from your vaccination appointment, email ashallon@ageuk.org.uk or call **07947 188 221**.

26. I'm vulnerable – do I need to travel to get the vaccine?

The NHS is planning a mixed approach to ensuring that people who are eligible can get the vaccine safely. Community teams will take the vaccine to care home residents and those who can't leave home.

27. Has the MHRA approved care home jabs?

Yes, this has been approved and the NHS has been working to ensure it can safely transport the vaccine and deliver it to care homes. The roll out to care homes has now started and the NHS's ambition, if supplies allow, is to have offered vaccines to all residents, as part of the most vulnerable 13 million people, by the middle of February.

28. Can I get the COVID-19 vaccine privately?

No. COVID-19 vaccinations are currently only available through the NHS. Remember, the vaccine is free of charge. Anyone who claims to be able to provide you with a vaccine for a fee is likely to be committing a crime and should be reported to the Police 101 service and/or Local Trading Standards.

29. Why have I not been contacted by anyone about a vaccination?

If you are 18 or over, or if you'll turn 18 before 1 July 2021, or over or on the Shielded Patient List, then it is likely that you have been contacted by the NHS already. If you haven't, this could be for a number of reasons, but is most likely to be because you are not registered with a GP or have recently moved, and the NHS therefore doesn't have your contact details.

If you have never registered with a GP or haven't been to a GP for a number of years, we would recommend speaking with your local practice about registering. As well as getting access to COVID-19 vaccines, being registered with a GP also means you are invited to important health checks such as for cancer or heart disease, and can access care easier when you need it.

More information on registering with a GP is available on the NHS website.

30. Does the NHS have the capacity and supplies available if lots of people now book?

The vast majority of people in these groups have already either had their first dose or are booked in to be vaccinated shortly. The NHS is confident that the supplies and booking slots are available to accommodate the expected number of people who may now come forward.

31. How is the NHS ensuring that the vaccine won't be wasted?

NHS plans are based around ensuring that waste is minimised. For example, this includes grouping vaccinations in one GP practice or high volume sites and ensuring that the numbers of people each site is able to see in one week is in line with the stock they receive.

32. What if I book an appointment through the NHS website or 119 and I need to rearrange it?

If you need to rearrange an appointment that you booked through the NHS website, you can do this through the 'manage your appointments' section on the booking page.

If you booked through 119, you can also ring to rearrange your appointment. If you can't attend your appointment for any reason, please cancel or rearrange it so that the appointment slot can be given to someone else who needs it.

33. Can I still book if I previously had an appointment but didn't attend or cancelled?

Yes. Only those who have had a vaccination recorded are marked on our system and are therefore unable to book again.

34. A letter came to my home but it was for someone else. Can I still use it to book an appointment?

No. Unless you are aged 18 or over, or if you'll turn 18 before 1 July 2021, or over or on the Shielded Patients List or an eligible frontline health or social care worker or are the main carer for someone at high risk you will not be able to receive your vaccination yet. If you receive a letter for someone who does not live at your address anymore, please return to sender in the usual way so that our records can be updated.

35. What about people with uncertain immigration status? Can they receive the vaccine and is it safe?

Vaccines will be offered to every adult living in the UK free of charge by the NHS, regardless of immigration status. This will include anyone living in the UK without permission. Primary medical care is free of charge to all overseas visitors and so would not require any status checks to be carried out before accessing any medical care.

Anyone invited for a vaccine should never be denied one for not having a NHS number. While NHS numbers are important for the administrative process, they are not a pre-condition for being offered a vaccine. If you are registered with a GP, then they will contact you in due course. If you aren't registered, NHS Regional teams, working locally will reach out to unregistered people to ensure they are offered the vaccine.

COVID-19, side effects and ingredients

36. I've already had COVID-19. Should I get vaccinated?

Yes, you should get vaccinated if you are offered the COVID-19 vaccine by the NHS. The MHRA has decided that getting vaccinated is just as important for those who have already had COVID-19 as it is for those who haven't.

37. Can the vaccine cause side effects?

Like all medicines, vaccines can cause side effects. Most of these are mild and short-term, and not everyone gets them. The Medicines Regulator, the MHRA, has confirmed the benefits of the AstraZeneca vaccine in preventing COVID-19 continue to outweigh the risks, this is despite a possible link between the vaccination and extremely rare and unlikely specific blood clots.

The advice continues to be that the benefits of vaccination continue to outweigh any risks and that vaccines continue to be the best way to protect against COVID-19.

If your first dose was with the AstraZeneca vaccine and you did not suffer any serious side effects you should have the second dose on time as you may still be at high risk of the complications of COVID-19. Having the second dose will give you higher and longer lasting protection.

For more information on common side effects, read the [NHS COVID-19 vaccination: A guide for older adults](#).

38. Will the vaccine work with the new strain of COVID-19?

There is no evidence currently that the new strain will be resistant to the current vaccines. Viruses, such as the winter flu virus, often branch into different strains, but these small variations rarely make vaccines ineffective.

39. What is the guidance on allergies?

People with history of a severe allergy to the ingredients of the vaccines should not be vaccinated.

40. What is the guidance for pregnant women and those who are breastfeeding?

The MHRA has updated its guidance for pregnant women and those who are breastfeeding.

If you're pregnant, you should be offered the COVID-19 vaccine when you're eligible for it.

It's preferable for you to have the Pfizer/BioNTech or Moderna vaccine because they've been more widely used during pregnancy in other countries and have not caused any safety issues. Pregnant women are able to book through the NHS booking service and will be directed to vaccination centres offering Pfizer and Moderna in their local area in line with this guidance. If you are pregnant you can also speak to your GP practice or maternity service if you have any questions about the vaccine or can talk to a healthcare professional at your vaccination appointment.

You can also have the COVID-19 vaccine if you're breastfeeding.

Speak to a healthcare professional before you have the vaccination. They will discuss the benefits and risks with you.

There's no evidence that the COVID-19 vaccine has any effect on your chances of becoming pregnant. There's no need to avoid pregnancy after vaccination. The vaccine cannot give you or your baby COVID-19. Women of childbearing age, those who are pregnant or breastfeeding can also read the detailed information in this [NHS COVID-19 vaccination guide](#).

41. Where can I find information about the vaccine ingredients?

A detailed review of the vaccines and their ingredients have been provided by the MHRA and can be found at the following links:

[Pfizer/BioNTech vaccine information is available on the GOV.UK website.](#)

[Oxford/AstraZeneca vaccine information is available on the GOV.UK website.](#)

[Moderna vaccine information is available on the GOV.UK website.](#)

The British Islamic Medical Association has also produced a helpful guide for the Muslim community which is [available on its website](#).

42. Does the vaccine include any parts from foetal or animal origin?

No. There is no material of foetal or animal origin in any of the vaccines. All ingredients are published in healthcare information on the MHRA's website and can be found at the following links:

[Pfizer/BioNTech vaccine information is available on the GOV.UK website.](#)

[Oxford/AstraZeneca vaccine information is available on the GOV.UK website.](#)

[Moderna vaccine information is available on the GOV.UK website.](#)

43. Can the vaccine alter your genetic material?

There is no evidence to suggest that individual genetic material will undergo any alteration after receiving the vaccine.

44. Were the vaccines tested on high-risk groups?

For each of the vaccines, trial participants included a range of those from various ages, immune-compromised and those with underlying health conditions. Details of trial participants for the vaccines are published online:

Pfizer/BioNTech vaccine information is available on the GOV.UK website.

Oxford/AstraZeneca vaccine information is available on the GOV.UK website.

Moderna vaccine information is available on the GOV.UK website.

More information

45. Where can I find more information about the COVID-19 vaccine?

For more information on the vaccination programme in North West London, visit the NWL London NHS website.

City of Westminster
